**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claim 1, it is unclear how the mobile establishes PPP session with itself. The mobile appears to be establishing a PPP session with the base stations.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Dynarski et al U.S. Patent Number 6,628,671.

Re Claims 1, 4, 5, , fig. 1 teaches mobile 14 establishing at least two PPP sessions for redundant transmission with base stations 1 and 2 (See col. 8, lines 4-9); Network access server uses the IMSI number of mobile to maintain a table that maps (classifying the datagrams....PPP session) the IMSI numbers to the PPP sessions (See

col. 7, lines 49-60), wherein the Network access server receives datagrams from the mobile on the physical layer and processes the received datagrams in the PPP session; MCP handover is performed whereby the a particular PPP is established and selected wherein once the a handoff PPP is selected, the datagrams within the session are further process in the network layer (See col. 15, lines 40 +: each layer is associated with management plane).

Re Claims 2, 6, refer to Claim 1, wherein de-capsulation/encapsulation is performed in the layers to process the datagram.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dynarski et al U.S. Patent Number 6,628,671 in view of Fujisaki et al U.S. Patent Number 6,466,574

Re Claims 3 and 7, '671 fails to explicitly teach the selecting one of the processed datagrams as recited in the claim. However, Fujisaki et al teaches in fig.4 wherein the receiving node receives redundant copies of the packets from redundant path whereby the node selects the proper sequence of the packets (comparing the datagram and deleting the out of sequence/error packets). One skilled in the art would

have been motivated to compare datagrams and delete error packets for reliability.

Therefore, it would have been obvious to one ordinary skilled to combine the teachings.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

U.S. Patent Number 6370118 teaches simultaneous set up of PPP;

U.S. Patent Number 6590879 teaches CDMA handoff.
